China Available immediately

PROFESSIONAL SUMMARY

Automation and controls engineer with 5+ years of DCS engineering and EPC project delivery, including direct ABB 800xA DCS migration and SCADA/HMI design in regulated process environments. Acted as design authority for electrical and controls scope on a USD 250M offshore EPC and a 350 MWp solar portfolio, coordinating in-house and OEM engineering teams to zero open items at handover. B.Tech in Electronics and Instrumentation Engineering; MBA in Energy Management (TU Berlin) applying PyPSA system modelling. Fluent English; open to relocation.

EXPERIENCE

ib vogt GmbH, Berlin, Germany | Controls and Electrical Systems Engineer - EPC Solar (Working Student)

April 2025 - September 2025

- 18% NCR cut: acted as design authority for SLDs, control cabinet schematics and 33 kV MV transformer drawings across 42 panels (680+ I/O); closed engineering errors before construction across 6 sites, avoiding a 2-week commissioning delay.
- 35% OTD improvement: coordinated in-house and OEM engineering teams (Huawei, SMA, KACO, Gantner) across 6 concurrent EPC sites; resolved RFIs and engineering issues during installation and commissioning.
- 6 concurrent sites delivered to handover: led site engineering activities under limited supervision, set technical priorities and coordinated cross-discipline teams across electrical, controls and SCADA scope.
- SOPs, RFQs and commissioning protocols authored: produced risk reports with ranked mitigations from site audits; tracked KPI reporting via Power BI and procurement records in SAP Ariba.

ABB Energy Industries, Bengaluru, India | Product Engineer - Process Automation

January 2023 - September 2024

- MTBF up 43%: led ABB 800xA DCS migration of 45+ legacy ProControl P14 control modules, converting C-based logic to IEC 61131-3 Structured Text; acted as design authority for fault detection and alarm rationalisation.
- HMI build effort cut 25%: designed SCADA/HMI graphics for 6 sequential process treatment stages in ABB 800xA to Design Data Sheets and usability standards, applying object-based engineering across the build.
- Zero critical defects at go-live: executed FAT, SAT and commissioning across 3 concurrent automation projects (USD 12M); resolved 38

DCS AND AUTOMATION ENGINEERING

ABB 800xA, Yokogawa CENTUM VP - 5+ yrs DCS design and delivery.

- ABB 800xA DCS migration, SCADA/HMI design, object-based engineering
- IEC 61131-3 (ST, FBD, Ladder); alarm management to NAMUR NE 107
- Redundancy (HAC), Historian, OPC DA/AE/UA, Modbus, IEC 61850

PROJECT ENGINEERING AND DESIGN AUTHORITY

180+ ISA sheets, 65 BOMs, 42 panels - all first-pass.

- Design authority for SLD, control schematic and panel review
- Conceptual-to-engineering documentation: FDS, MRB Index, I/O lists
- Modelling and simulation: PyPSA energy systems, PCA + DNN fault models

COMMISSIONING AND SITE DELIVERY

14 FATs, 8 SATs, 1,850+ loop checks; zero open items at handover.

- FAT, SAT, loop checks, pre-commissioning and installation support
- RFI resolution and engineering error correction on live sites
- 99.7-99.9%+ uptime delivered across DCS and EPC programmes

TEAM AND VENDOR COORDINATION

8 OEM vendors; 6 concurrent sites; cross-discipline teams coordinated.

- Coordinated in-house and OEM engineering teams on live projects
- Technical coaching delivered: SOPs and training adopted fleet-wide

control-level defects and maintained audit-ready I/O lists (1,200+ signals) and ISA sheets.

- Fault-tolerant 800xA operations configured: server-to-server redundancy (HAC), Historian and OPC DA/AE/UA communications; alarm strategy engineered to NAMUR NE 107 with PLC tag optimisation to prevent license overflows.

Yokogawa India Ltd., Bengaluru, India | Project Engineer - EPC

Automation (Offshore)

September 2020 - December 2022

- 99.7% uptime, zero open items at handover: led DCS engineering on a USD 250M Qatar Energy offshore EPC; integrated 355 RTUs, 12 PLCs and Yokogawa CENTUM VP DCS across 4 platforms with N+1 redundancy.
- 35% defect density cut: directed 14 FATs, 8 SATs and 1,850+ loop checks; coordinated engineering teams across 4 platforms and standardised procedures fleet-wide; 93% first-pass rate.
- 180+ ISA sheets, 65 panel BOMs and 3,200+ cable schedules authored as design authority: reviewed SLDs and control schematics for power distribution, ESD, fire and gas and HVAC to IEC 61511 and API RP 551; zero rework on any submission.
- 8 OEM vendors coordinated (Emerson, Honeywell, ABB, Schneider Electric) across India and Qatar: led technical bid reviews and RFI support; resolved 38 quality exceptions via structured corrective action.

EDUCATION

TU Berlin, Berlin, Germany - MBA, Energy Management

October 2024 - present

Thesis: green hydrogen cost modelling across 9 countries (PyPSA, 8,760 hourly steps per country); key finding: a 1% rise in financing cost (WACC) cancels a 10% gain in renewable output. Coursework: Project Management, Strategic Management, Supply Chain Management.

Amrita Vishwa Vidyapeetham, India - B.Tech, Electronics and Instrumentation Engineering

July 2016 - August 2020

Thesis: fault detection in satellite power systems using deep learning (PCA and DNN on NASA ADAPT data, 99.75% accuracy versus SVM and MLP baselines). Publication: 'ML Algorithms for Gas Leak Detection', Springer Singapore, 2020 (DOI: 10.1007/978-981-15-7345-3_7).

- RCA and corrective action across 38+ control system failures

TOOLS

- ABB 800xA, Yokogawa CENTUM VP
- AutoCAD, SAP Ariba/ERP, Power BI
- MS Excel (advanced), MS Project, Python

LANGUAGES

- English - C2 (Business proficient)
- German - B1 (improving to B2)
- Hindi - Native

CERTIFICATIONS

- CDCP - Certified Data Centre Professional (in progress, 2025)
- IEC 61511 Functional Safety - Yokogawa and ABB (2020-2024)
- ABB 800xA DCS - Applied Operations, ABB Energy Industries (2023-2024)
